

## 6: GNU Make

`bit.ly/2018rr`

# GNU Make

- ▶ Automation the full project
- ▶ Document dependencies
- ▶ Only re-run things that need to be re-run

# Automate the process (GNU Make)

```
R/analysis.html: R/analysis.Rmd Data/cleandata.csv
```

```
cd R;R -e "rmarkdown::render('analysis.Rmd')"
```

```
Data/cleandata.csv: R/prepData.R RawData/rawdata.csv
```

```
cd R;R CMD BATCH prepData.R
```

```
RawData/rawdata.csv: Python/xls2csv.py RawData/rawdata.xls
```

```
Python/xls2csv.py RawData/rawdata.xls > RawData/rawdata.csv
```

# Automate the process (GNU Make)

```
R/analysis.html: R/analysis.Rmd Data/cleandata.csv  
    cd R;R -e "rmarkdown::render('analysis.Rmd')"  
  
Data/cleandata.csv: R/prepData.R RawData/rawdata.csv  
    cd R;R CMD BATCH prepData.R  
  
RawData/rawdata.csv: Python/xls2csv.py RawData/rawdata.xls  
    Python/xls2csv.py RawData/rawdata.xls > RawData/rawdata.csv
```

# Automate the process (GNU Make)

```
R/analysis.html: R/analysis.Rmd Data/cleandata.csv
```

```
cd R;R -e "rmarkdown::render('analysis.Rmd')"
```

```
Data/cleandata.csv: R/prepData.R RawData/rawdata.csv
```

```
cd R;R CMD BATCH prepData.R
```

```
RawData/rawdata.csv: Python/xls2csv.py RawData/rawdata.xls
```

```
Python/xls2csv.py RawData/rawdata.xls > RawData/rawdata.csv
```

# Automate the process (GNU Make)

```
R/analysis.html: R/analysis.Rmd Data/cleandata.csv  
    cd R;R -e "rmarkdown::render('analysis.Rmd')"  
  
Data/cleandata.csv: R/prepData.R RawData/rawdata.csv  
    cd R;R CMD BATCH prepData.R  
  
RawData/rawdata.csv: Python/xls2csv.py RawData/rawdata.xls  
    Python/xls2csv.py RawData/rawdata.xls > RawData/rawdata.csv
```

# Automation with GNU Make

- ▶ Make is for more than just compiling software
- ▶ The **essence** of what we're trying to do
- ▶ Automates a workflow
- ▶ Documents the workflow
- ▶ Documents the dependencies among data files, code
- ▶ Re-runs only the necessary code, based on what has changed

# Installing Make

- ▶ On Macs, Make should be installed. Type “make --version” to check.
- ▶ On Windows, probably the easiest is to install **Rtools**, which includes Make.

[cran.r-project.org/bin/windows/Rtools](https://cran.r-project.org/bin/windows/Rtools)

# How do you use Make?

- ▶ If you name your make file `Makefile`, then just go into the directory containing that file and type `make`
- ▶ If you name your make file `something.else`, then type `make -f something.else`
- ▶ Actually, the commands above will build the **first** target listed in the make file. So I'll often include something like the following.

```
all: target1 target2 target3
```

Then typing `make all` (or just `make`, if `all` is listed first in the file) will build all of those things.

- ▶ To build a specific target, type `make target`. For example, `make Figs/fig1.pdf`

# Make with R Markdown

To use Make with R Markdown, you'll use a command like:

```
R -e "rmarkdown::render('my_report.Rmd')"
```

You'll need to tell your operating system where it can find **pandoc**. **RStudio** includes pandoc, but you need to add the relevant directory to your PATH.

**Mac:**

```
/Applications/RStudio.app/Contents/MacOS/pandoc
```

**Windows:**

```
"c:\Program Files\RStudio\bin\pandoc"
```

# ~/.bash\_profile

```
export PATH=$PATH:/Applications/RStudio.app/Contents/MacOS/pandoc

noclobber=1      # prevent overwriting of files
IGNOREEOF=1      # disable Ctrl-D as a way to exit
HISTCONTROL=ignoredups

alias cl='clear;cd'
alias rm='rm -i'
alias mv='mv -i'
alias cp='cp -i'
alias ls='ls -GF'
alias 'l.='='ls -d .[a-zA-Z]*'
alias ll='ls -lh'
alias md='mkdir'
alias rd='rmdir'
alias rmb='rm .*~ *~ *.bak *.bk!'

alias Rb='R CMD build --force --resave-data'
alias Ri='R CMD INSTALL --library=/Users/kbroman/Rlibs'
alias Rc='R CMD check --library=/Users/kbroman/Rlibs'
alias Rcc='R CMD check --as-cran --library=/Users/kbroman/Rlibs'
```

# PATH in Windows

# PATH in Windows

# PATH in Windows

# Variables

- ▶ Define a **variable** like  
`R_OPTS=--vanilla`
- ▶ Use it with a \$ and () or {}, for example:  
`R CMD BATCH $(R_OPTS) fig1.R`

# Automatic variables

There are a bunch of **automatic variables** that you can use to save yourself a lot of typing.

Here are the ones I use most:

<code>\$@</code>	the file name of the target
<code>\$&lt;</code>	the name of the first dependency
<code>\$^</code>	the names of all dependencies
<code>\$(@D)</code>	the directory part of the target
<code>\$(@F)</code>	the file part of the target
<code>\$(&lt;D)</code>	the directory part of the first dependency
<code>\$(&lt;F)</code>	the file part of the first dependency

# Pattern rules

Pattern rules are like wildcards for file names: if a bunch of files are to be built the same way, you can use the symbol % as a wildcard.

For example, if you have two figures `fig1.pdf` and `fig2.pdf` that are to be built by `fig1.R` and `fig2.R`, respectively, you might do:

```
Figs/%.pdf: R/%.R  
    cd $(<D);R CMD BATCH $(<F)
```

The two figures' file names will need to be spelled out somewhere, for example as dependencies.

# Fancier example

```
FIG_DIR = Figs

mypaper.pdf: mypaper.tex $(FIG_DIR)/fig1.pdf $(FIG_DIR)/fig2.pdf
    pdflatex mypaper

# One line for both figures
$(FIG_DIR)/%.pdf: R/%.R
    cd R;R CMD BATCH $(<F)

# Use "make clean" to remove the PDFs
clean:
    rm *.pdf Figs/*.pdf
```

# Resources

  - `R CMD BATCH filename:Makefile`
  - `filename:Makefile user:yihui`

# Activity

Go back to your R Markdown documents from this morning.

- ▶ Write a `Makefile` to produce different types of outputs from your various Rmd files.
- ▶ Add `make all` and `make clean` as targets
- ▶ What happens if you run `make all` twice?
